DAYDROP

MOISTURIZING DROPS WITH
HYALURONIC ACID AND ECTOINE 2%

Every 10th citizen in
Spain suffers from dry eye
disease

SUITABLE FOR DRY AND IRRITATED EYES

Many people worldwide have symptoms of dry eye disease. **In Spain alone 5,000,000 people are affected by dry eye syndrome, representing 11% of the total population***.

**PRESERVATIVE
AND PHOSPHATE
FREE**

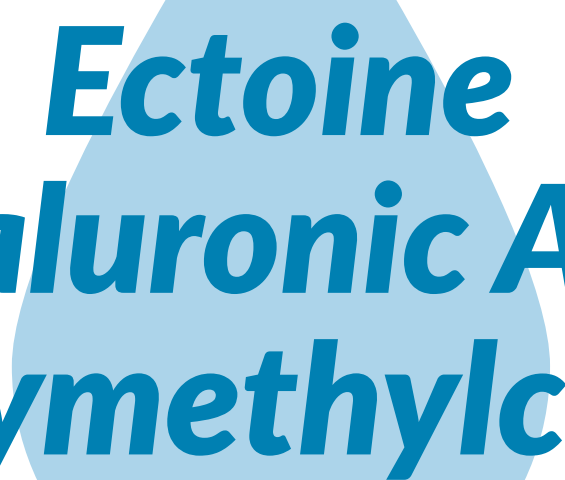

What is DayDrop?

Daydrop is an **ophthalmic solution indicated to alleviate the ocular dryness and irritation** caused by environmental factors, the prolonged use of screens or contact lenses, or certain eye pathologies that occur with these symptoms.

Daydrop is a **CE** marked medical device.

TRIPLE ACTION

Ectoine
Hyaluronic Acid
Carboxymethylcellulose

Ingredients

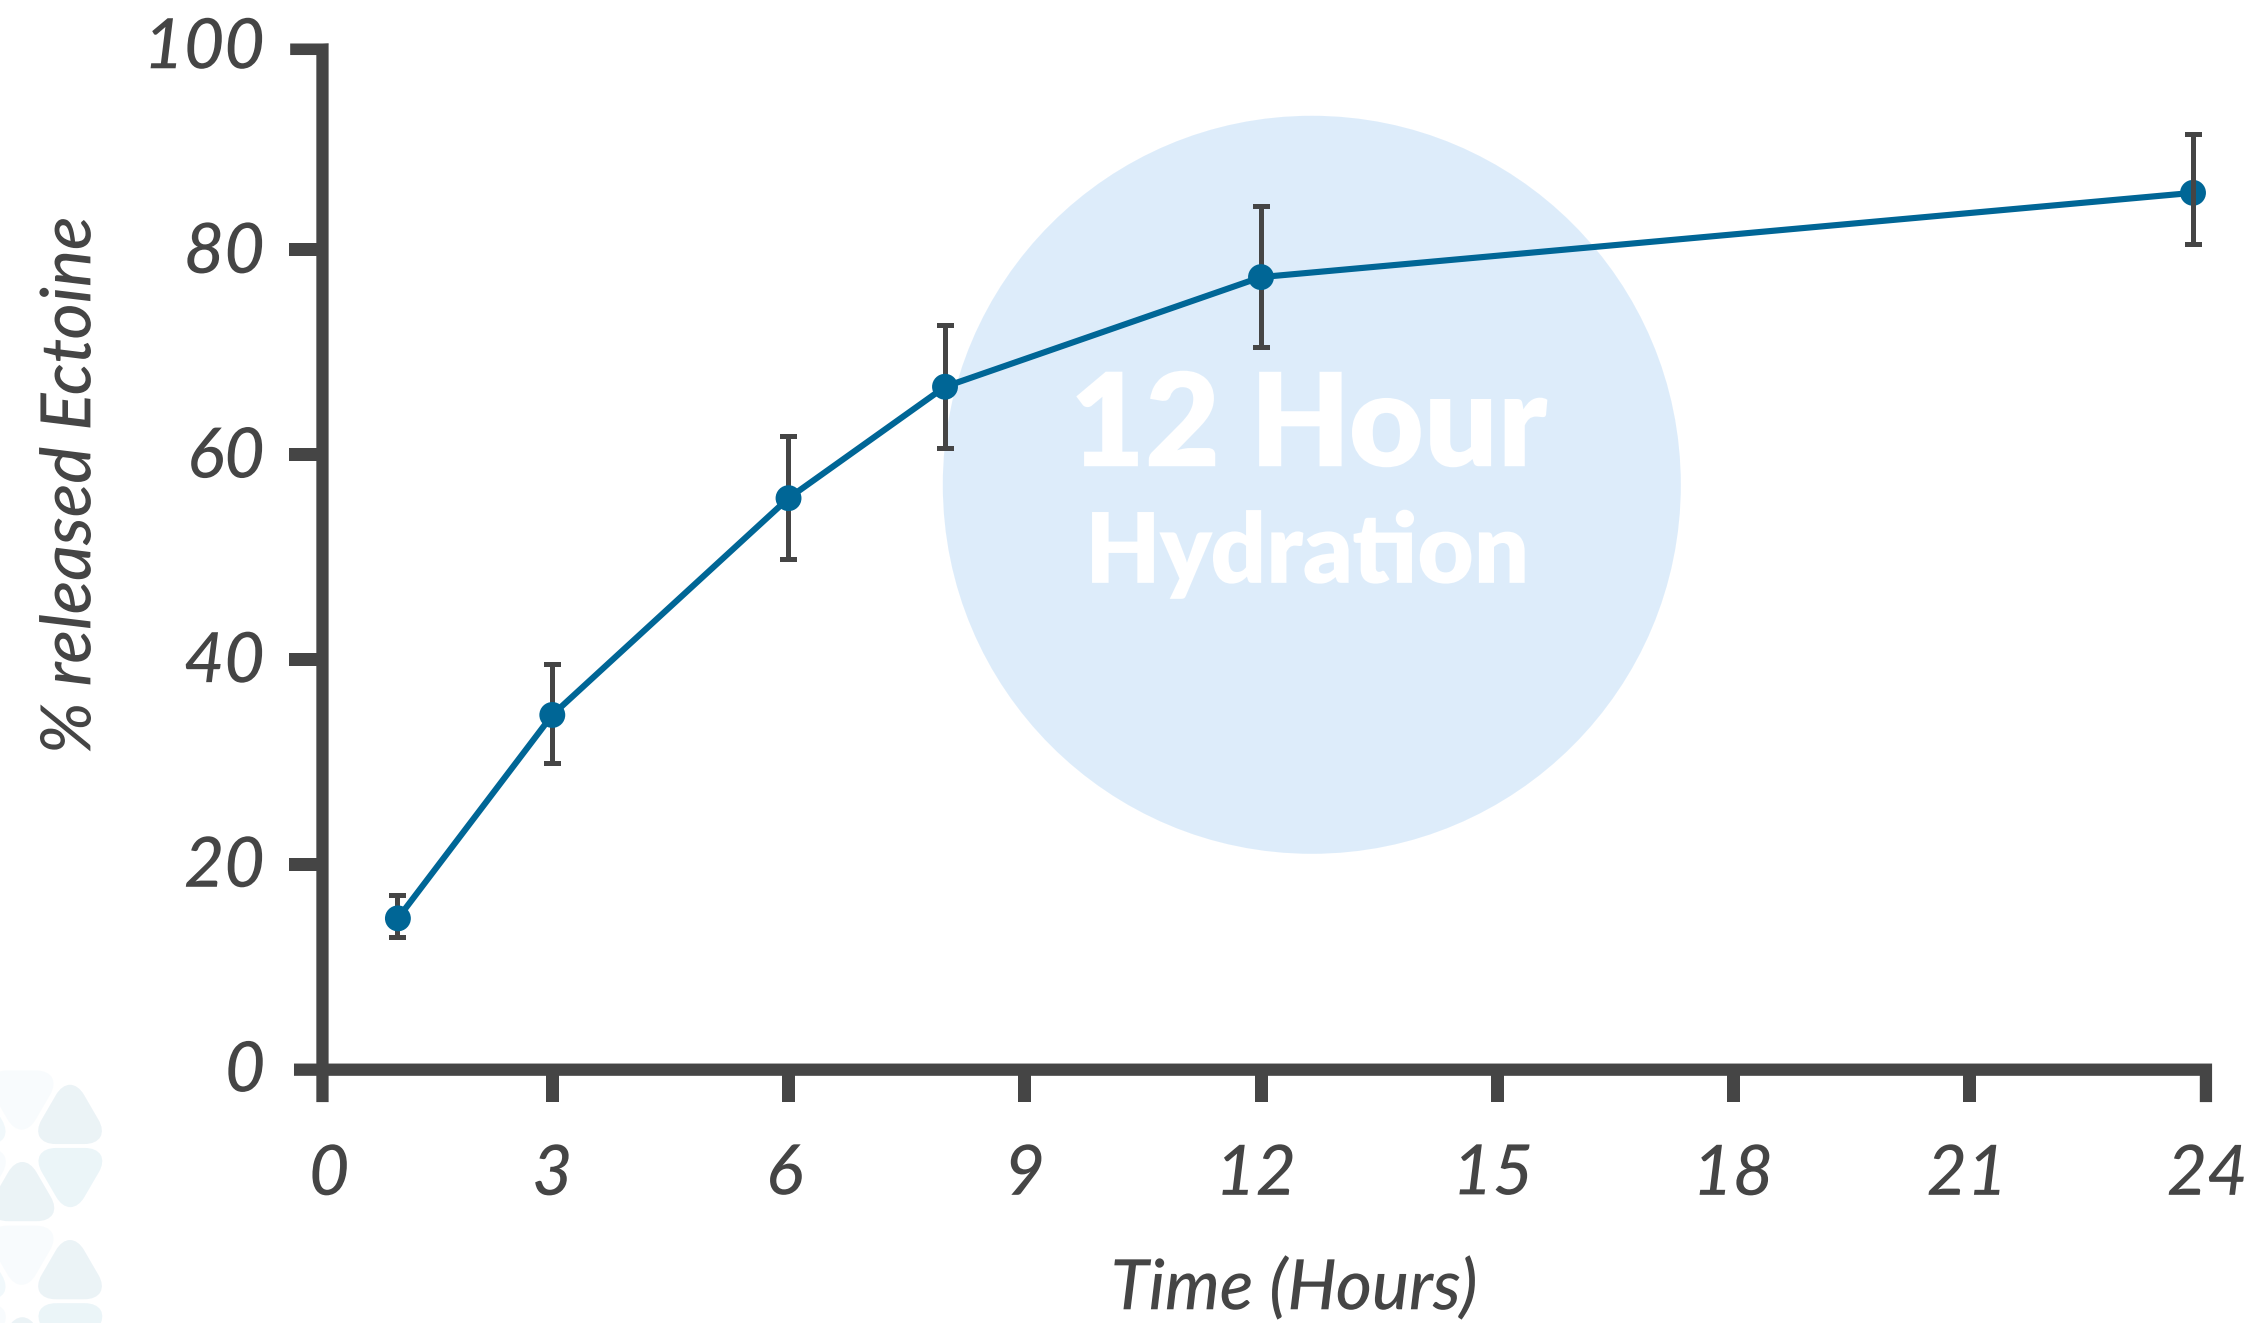

Ectoine, sodium hyaluronate, carboxymethylcellulose, borate buffer (boric acid, sodium tetraborate) and purified water.

DayDrop is a sterile, pH buffered, preservative and phosphate free eye solution.

Properties

- › Relieves dryness and irritation of the eyes due to prolonged computer use, dry air exposure, smoking, laser operations, certain medical conditions and other adverse factors.
- › Protects against external allergens, alleviating symptoms.
- › Compatible with contact lenses.
- › Stabilizes the tear film.
- › Easy to use.
- › Well tolerated and safe

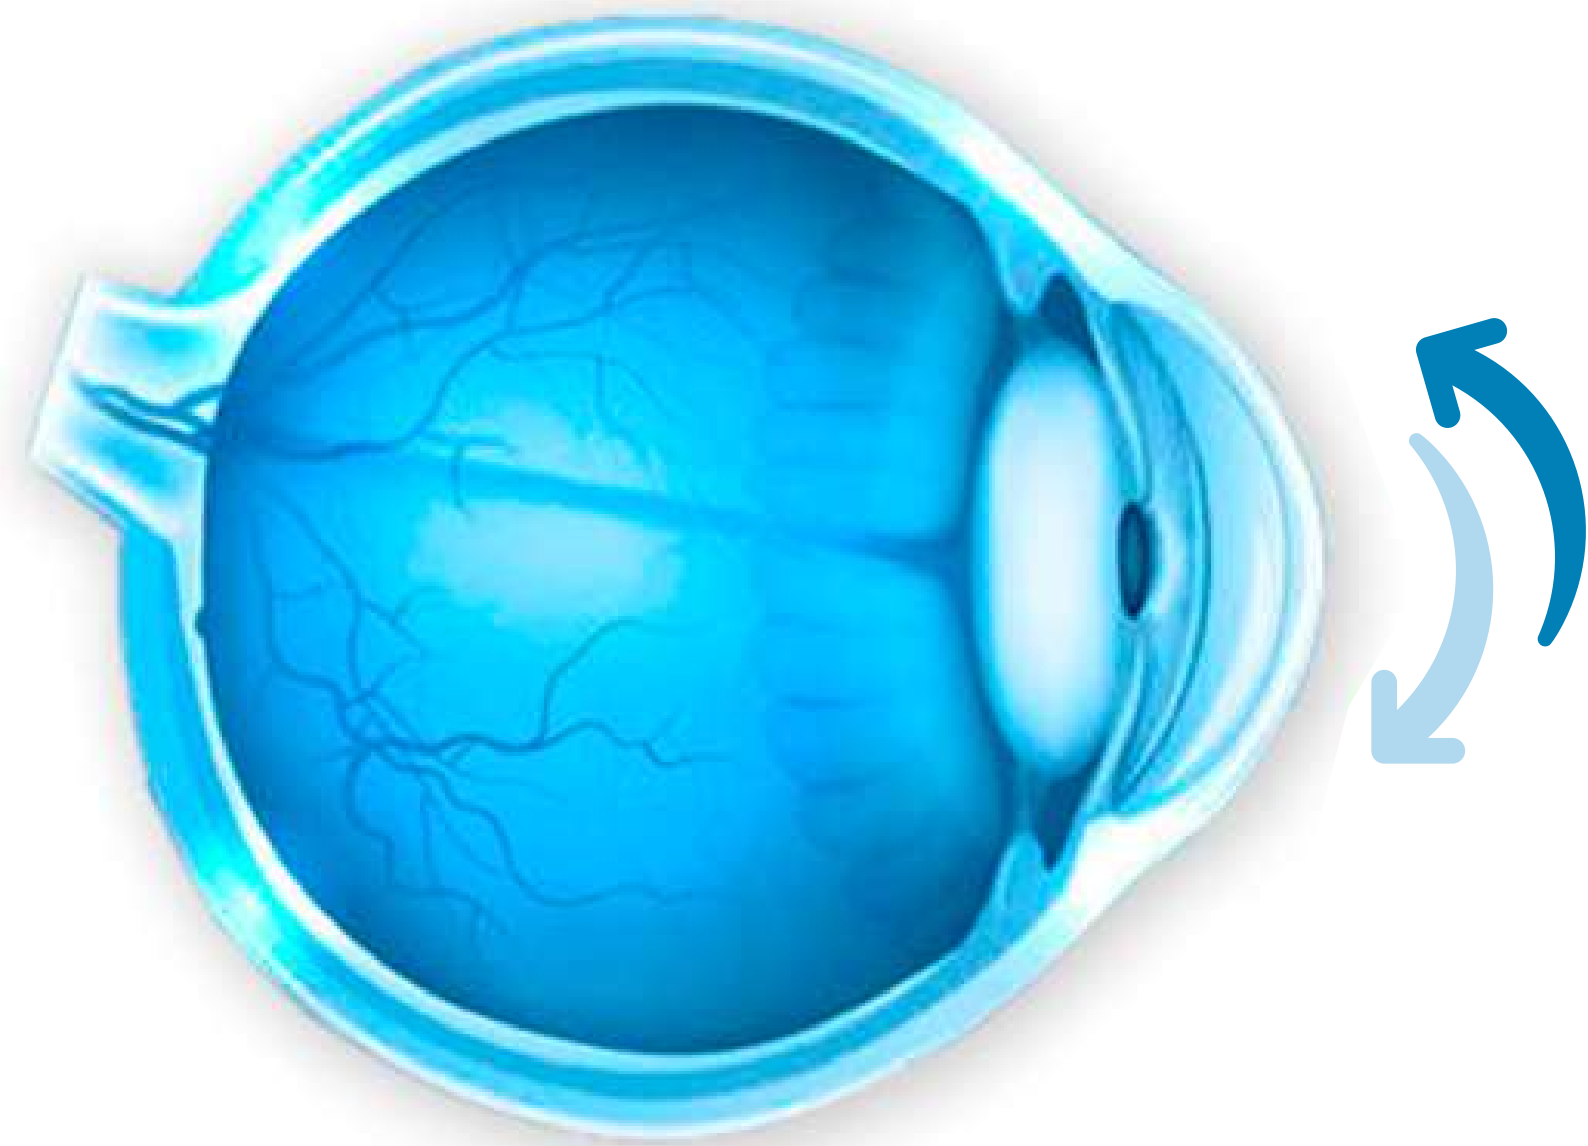

Curve showing the release of ectoine in **DayDrop** within 12 Hours.

How DayDrop acts

Due to the rheological properties of both Hyaluronic Acid and Carboxymethylcellulose, the combination of both polymers in **DayDrop** acts synergistically increasing the retention time of the drop on the ocular surface.

This allows the Ectoine to be released in a sustained way and moisturize, repair tear film and protect the mucous membranes.

› ***Long-lasting effect***

› ***Eye Protection***

Posology

It is administered topically using an ophthalmological route.
The dose is 1–2 drops in each eye, as many times as needed.

Directions for use

1. Wash and dry hands before using.
2. Remove a single-use vial from the strip.
3. Verify that the vial is not chipped or cracked.
4. Turn over the plug to open the vial.
5. Remove the plug.
6. Tilt your head back and look up.
7. Gently pull the lower eyelid to form a small bag between the eyelid and the eye.
8. Hold the container with the other hand between the thumb and the middle finger and gently press to drop one or two drops of DayDrop into the eyelid bag.
9. Blink several times to allow drop distribution all over the eye.
10. If the drop has not entered, apply again.
11. Carefully wipe any rest of the product that may be around the eyelid with gauze.
12. Repeat the procedure with the other eye.
13. Discard the single-use vial (once opened do not re-use the vial for the next doses).
